The image consists of a large grid of black squares arranged in a rectangular pattern. The grid is composed of approximately 10 columns and 10 rows of squares. Each square is a uniform size and is positioned at regular intervals from each other. The entire grid is set against a white background.

A horizontal bar composed of eleven black rectangular blocks of uniform width. A single white rectangular block is positioned in the center gap between the sixth and seventh blocks from the left.

[REDACTED], [REDACTED]

A horizontal sequence of 20 dark gray rectangular blocks arranged in four rows. The first row has 5 blocks, the second row has 6 blocks, the third row has 5 blocks, and the fourth row has 4 blocks.

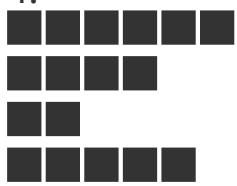

The image consists of four horizontal rows of dark gray squares. The first row has 11 squares. A vertical line segment is placed between the 11th and 12th squares. The second row has 19 squares. The third row has 18 squares. The fourth row has 5 squares, followed by a vertical line segment.

The image consists of four horizontal rows of black squares. The first three rows each contain 24 squares, while the fourth row contains only 5 squares followed by a short vertical line. This visual representation is likely a digital signal or a binary code sequence.

The image consists of five horizontal rows of dark gray squares. The top four rows each have 8 squares. The bottom row has 4 squares followed by a vertical bar symbol (|) on its right side.

[REDACTED] | [REDACTED],

A horizontal bar consisting of 20 dark gray squares, followed by a thin vertical line.

A horizontal row of 20 dark gray squares, evenly spaced, forming a visual separator at the bottom of the page.

A horizontal row of 24 dark gray squares, likely representing a grayscale calibration strip or a visual representation of a grayscale gradient.

A horizontal row of 20 dark gray squares, representing a 1x20 grid.

A horizontal row of 20 dark gray squares, likely representing a grayscale image or a sequence of frames.

Figure 1. A schematic diagram of the experimental setup. The light source (laser) emits a beam of light that passes through a lens and a beam splitter. The beam splitter splits the light into two paths: one path goes through a polarizer and a lens, and the other path goes through a lens and a polarizer. The two paths converge at a point where they are imaged by a camera.

A horizontal bar consisting of 24 equal-sized dark gray squares arranged side-by-side.

A horizontal row of 20 dark gray rectangular blocks, evenly spaced, representing a sequence or a set of items.

A horizontal bar composed of eleven dark gray rectangular blocks of uniform width, arranged side-by-side. To the right of this main group is a single, much smaller vertical black bar.

The image consists of seven horizontal rows of black squares. Each row represents a sequence of binary digits (bits). The first four rows each contain 10 bits. The fifth row contains 11 bits, starting with a '1' and ending with a '0'. The sixth row contains 12 bits, starting with a '0' and ending with a '1'. The seventh row contains 13 bits, starting with a '1' and ending with a '0'. The bits are represented by solid black squares, with a vertical line separating the first bit from the rest in each row.
